

Application layer:

- Creates a window
- Registers a window
- Sets up the menu
- Displays the window
- Prints character to display

Session layer:

- Connect: creates comm port file and registers it (connection)
- Disconnect: closes the comm port file (destroys connection)

Physical layer:

- Write: sends bytes to comm port
- Read receives bytes from port
- Comm settings: allows to change port settings
- Set timeouts: sets time out settings for data transmission
